

CMPE/ISYE/SWEN233 Internet Programming

Term Project

2024-2025 FALL

Due Date: 06th January 2025 at 09:00

Submission: Upload your Term Project source files to Moodle (<http://moodle.ciu.edu.tr>) Compress (zip) all your folder and files before submission. No email submission will be accepted.

I. General Principles

- Project will be done in teams. At most **three** students can be in a project group.
- Each group can perform the project with **any website content they prefer**.
- A **progress report** has to be **filled/signed** by all group members and then, **LINKED to the designed website as an IMAGE**.
- **Any sort of cheating and/or plagiarism** will be punished by failure from the course and a report to the disciplinary committee of the University.
- **BOOTSTRAP is not allowed to be used**.
- Project concerns Web software development. Outcome should be demonstrated as Web site.
- Use external .css file(s) for all of your styles.
- All necessary JavaScript functions will be at external .js file(s).
- Try to design with good graphical elements. Use styles and pictures/images/etc.
- Due date of the project is strict there will be no delay in the project submissions. Get your projects ready before the due date.
- **STUDENTS ARE NOT ALLOWED TO USE BOOTSTRAP in their project. In case of using BOOTSRAP, the project grade for such students will be ZERO.**

Grading:

External CSS	5
External Js	5
Navigation Menu with CSS	5
Home Page	5
Items Page	5
Online Shopping Form	10
Total Payment Calculation	30
Calculate tax	10
Contact Us page	5
Form Validation	10
Confirmation Message	10
Total	100

II. Term Project Details

You need to prepare a web site for a company which provides online shopping and give details about its services/items. The web site will include the following 4 pages which should be connected with links through navigation menu done using CSS.

- Page 1: **Home Page of the Company**

You need to provide general information about the company and its services with some attractive images as a home page.

- Page 2: **Items Page - Information about each items and services of the Company**

You need to provide detailed description and images for each items/services.

- Page 3: **Online Shopping Form**

Design a page for calculating the total amount of money that the visitor will pay with the selected items, and their prices. Use the below *List of Items* table as a reference to design it. The online shopping form have to be **exactly same as** *List of Items* table sample with your content-related items, properties,... etc.

- Page 4: **Contact Us**

User should be able to fill the contact form with his/her name, surname, and additional comments. And, then the system should **validate** each form element.

List of Items

Items	Properties	Number of Items	Cost (\$)
☒ Item 1 (\$)	☐ Property 1 - price (\$) ☐ Property 2 - price (\$) ☒ Property 3 - price (\$) ☐ None	Units 1 2 3 4	
☐ Item 2 (\$)	☐ Property 1 - price (\$) ☐ Property 2 - price (\$) ☐ Property 3 - price (\$) ☐ None	Units	
☐ Item 3 (\$)	☐ Property 1 - price (\$) ☐ Property 2 - price (\$) ☐ Property 3 - price (\$) ☐ None	Units	
☐ Item 4 (\$)	☐ Property 1 - price (\$) ☐ Property 2 - price (\$) ☐ Property 3 - price (\$) ☐ None	Units	
Total Cost		Calculate	(\$) 0

- o User should be able to select **multiple** items via checkboxes.
- o User should be able to select one of the properties with the provided cost via radio buttons.
- o Use a drop down menu for the number of items that the visitor would like to buy.
- o **Cost** of the selected item should appear on the last column after items' unit chosen.
 - o **Cost:** The price for each item regarding properties may vary but you need to multiply the item price with the selected units (i.e. assume that **3 units** of "**Item 1**" with "**Property 3**" is selected; then the **Cost** = (price of property 3) * 3 units
- o **Total cost** is the summation of selected items' cost and it should appear after the "**Calculate**" button is clicked. Note that, before displaying the total cost, the following requirement should be applied: if the **total cost** is less than \$200, apply 15% tax (=total cost*0.15); otherwise apply 15% discount (=total cost*0.15).
 - o After the total cost appears, a confirmation message will be prompted to ask the visitor if s/he accepts the calculated total cost for payment. In case of acceptance; a **thank you** message will be alerted, otherwise **application withdraw** message will be alerted.
